

Your new tool: the objectiv acoustic App

for iPhone + iPad

BasicVersion:

Professional measurement (RTA) of sound and noise, storage of the results as screenshots.

Calculation and evaluation of the reverberation time for rooms in 4 simple steps with the option to print the conclusion as a .pdf document.

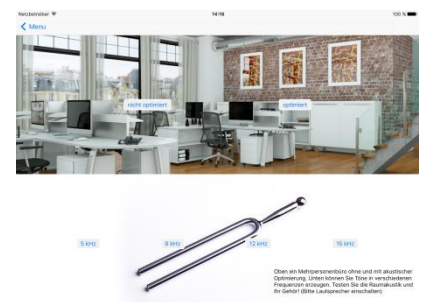

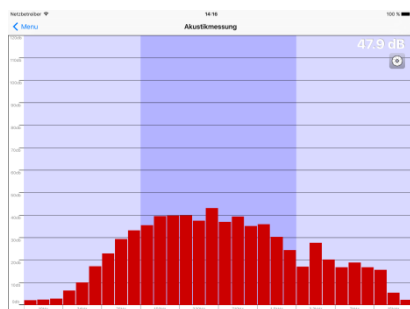

Simulation of acoustics before/after optimizing in a concrete example room plus test of your hearing ability in different frequency ranges.

ProVersion:

List of the recommended reverberation time of almost 50 different types of rooms.

This version is made for the use of any producer with his own products. The addition of user-defined absorbers allows the calculation of room acoustics by any vendor or consultant.

The result of the calculation can be personalized with any firm- or personal name.

Screenshots basic version

The App is available in the Apple Appstore only and for iOS. The programming, which is connected with the Apple hardware guarantees the constant high quality of the sound measurement. The microphones of Apple devices are on a reliable high standard. They are being calibrated by the producer during regular updates.
